

What can I use Blackwood for?

Flatbed trailers, Tilt Trailers, Dove Tails, Power Tails...any B Wise or Bri-Mar Trailer deck where optimum traction is important for rubber tire and rubber track machines.

What are the benefits of Blackwood?

The benefits of Blackwood over conventional wood or rubber decking can be summed up this way:
Safer, Stronger, Longer.

SAFER

Blackwood provides optimum traction on all trailer decking applications. Blackwood Lumber prevents slipping and makes loading equipment easier and safer, especially in wet conditions.

STRONGER

Blackwood is made of the highest quality lumber, infused with industrial grade rubber. This is the same rubber used at gun ranges to absorb bullets. Blackwood is made to withstand heavy impact that could damage conventional lumber.

LONGER

The rubber infusion in Blackwood does not fade or crack. It does not stain and can be cleaned easily with water. Blackwood will keep your trailer looking new and professional for years to come.

*Blackwood is not intended for use with metal track machines.
